Kristen M. Nicole is a Senior Project Engineer at the Electric Power Research Institute (EPRI). Based in Washington, DC her research activities are focused on power systems integration of variable generation. Her areas of interest include renewable resource characterization and forecasting, bulk system integration of solar and other variable generation, and interoperability and limits to the integration of distributed energy resources.

Prior to joining EPRI, Ms. Nicole was an energy analyst supporting the grid integration team for the U.S. Department of Energy Solar Energy Technologies Program. Ms. Nicole received her BA from Boston University and MBA from the George Washington University.
